

UNITED WATER IDAHO OFFERS FREE WATER-SAVING TOOLS

Everyone wants to save money and do their part for the environment. United Water Idaho wants to help our customers in this quest. That is why we offer free rain sensors and conservation kits.

Rain sensors will help homeowners with automatic sprinkler systems save money and water by shutting off the sprinkler system in the event of rain. This prevents the over watering of your yard and is healthier for your lawn. The homeowner is responsible for installing the sensor or contracting with a vendor to install the device.

The conservation kits contain hose timers and trigger spray nozzles. A hose timer will help "hose draggers" remember to shut off their sprinkler by shutting off the water. And, putting a nozzle on the hose helps everyone save water and money when washing cars, boats and bikes.

Both the conservation kits and rain sensors are available only to United Water Idaho residential customers.

Clip the coupons below and bring them to our office at 8248 W. Victory Road to receive your free water-saving tools.
