Conservation Measures

You can play a role in conserving water by becoming conscious of the amount of water your household is using, and by looking for ways to use less whenever you can. Conservation tips include:

- **Check every faucet in your home for leaks. Just a slow drip can waste 15 to 20 gallons a day, or almost 6,000 gallons per year.**
- **Check your toilet for leaks by putting a few drops of food coloring in the tank and watching for a few minutes to see if the color shows up in the bowl. It is not uncommon to lose up to 100 gallons a day from one of these otherwise invisible toilet leaks. Fixing a toilet leak can save more than 30,000 gallons a year.**
- **Use your water meter to detect hidden leaks. Simply turn off all taps and water using appliances, and then check the meter reading over a 15 minute period. If the meter moves, you have a leak.**
